Price - \$50,000

This product must take the prize for the most fascinating title of the year!

But this release from Entuity of Eye of the Storm is far more than just a catchy title – it is a full-blown heavy-duty network management suite that goes far beyond what most others are doing in this marketplace.

Eye of the Storm not only takes an inventory of a company's computer assets (as, of course, can other products) but it can provide information about the performance of the products, which is the reason it stands out from the crowd.

The heart of the system is the CMDB (configuration management database). Once the initial discover inventory is taken, this is populated to the CMDB, and then, over time, historical comparisons can be made to compare network performance and highlight where problems are to be found.

## See into the “Eye of the Storm” with this comprehensive package to see how your network is performing

By means of its Topology and Asset Navigator a graphical view of the network can be presented to the administrator who is able to obtain detailed information about switches, hubs, routers, servers, VLANs and ports on the network and how they are performing.

In addition the system is able to provide

problems can be identified or anticipated and the necessary solutions put in place.

Application access and compliance – an area which is becoming more and more important and critical these days. Eye of the Storm is able to allow selective delegation of authority to allow for adequate access without compromising overall security.

the essential information needed to make decisions on capacity planning, upgrades of software and hardware, patching and maintenance.

Entuity's Eye of the Storm is able to provide support in the following areas:

**Firewall support** – Initially providing support for Nokia firewalls (but extending this according to demand over time) Eye of the Storm will provide complete inventory and performance details

**VPN Gateway Support** – again with initial support for the Shiva VPN Gateway (but developing according to demand) this means that the administrator will know the number of tunnels in use as well as the maximum number of tunnels available to meet demands.

**System Support** – the system is able to capture all the critical details about CPU usage, memory statistics, users, processes, applications and allocations etc. so that

In conclusion we should point out that Eye of the Storm can work with several operating systems including Sun Solaris, Microsoft Windows Server 2003, and Red Hat Linux.

So for a comprehensive inventory and management solution - look for the catchily titled “Eye of the Storm”
