We really like the name of this product. Of course, the Storm is the vast number of devices that are attached to the network and the millions of data packets that are flying around the environment while the EYE is this appliance that can take a poignant look at all the items and the performance of the network from one centralized location. Whether you use this product continuously or for a single due-diligence report of the network, you'll receive key facts about the enterprise-level environment that can be used to repair logjams or prepare for purchasing needs and Entuity's Eye of the Storm Version 4.5 receives our Editor's Choice Award for performance and value.

Entuity offers to different purchasing avenues with the EYE software package that include the single use SAV license that allows an organization to use their product for a certain period of time to inventory and audit the various network appliances and devices used in the environment in addition to taking performance metrics of these items. The available reports will allow an enterprise-level business and management teams to see where improvements in the network are needed and what additional equipment needs to be purchased to meet 44 consumer requirements. On the

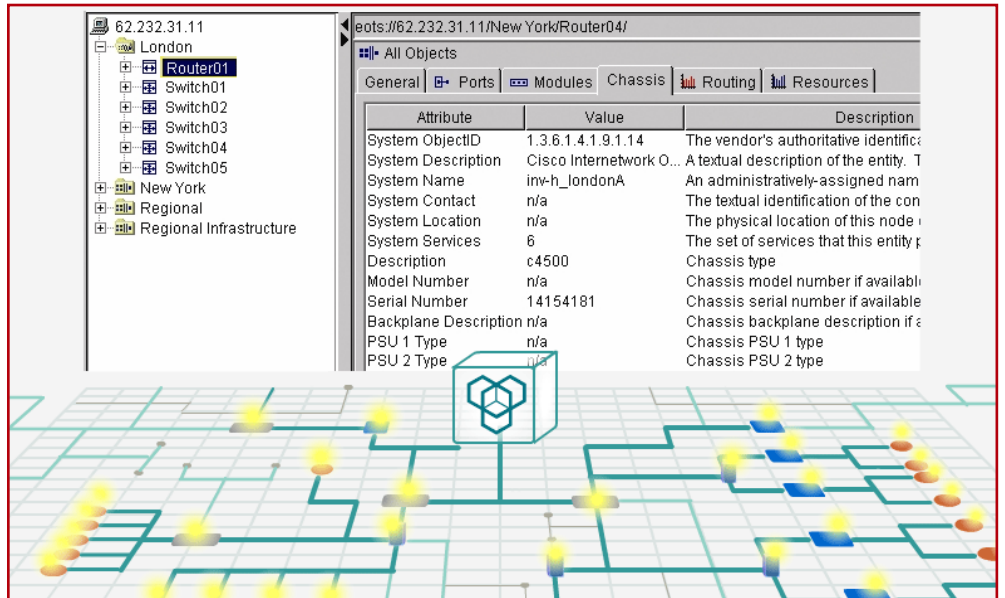

The software can inventory the network in a real-time environment.

other hand, the long-term license can be used to constantly monitor and inventory the network in a real-time environment in addition to searching for trouble spots or possible equipment failures.

The feature of the package that we think is the most impressive is the EYE's Topology and Asset Navigator which uses a TreeView drilldown structure and it allows administrators can

work personnel. The same data can be exported to several different formats that include HTML, PDF, CSV (delimited ASCII) and XML files.

Entuity's Eye of the Storm Version 4.5 software package is available for Microsoft Windows 2003, Sun Solaris, and Red Hat Linux operating system environments and has a starting price of \$50,000 for the long term license however you'll need to contact the

take a real-time view at the logical and physical connections between Layer 2 and Layer 3 applications and elements. It also provides detailed information about the network environment's switches, routers, hubs, servers, VLANs, and various ports along the network. All of these items can be exported and used by Visio 2000 & 2003 for a detailed management report.

EYE 4.5 stores historical data about the various products and performance information in the company's (CMDB) configuration management database. The data can be used for the preparation of dozens of useful reports that can be used by management and net-

company for the shorter SAV license's price. Visit the company's web site for more information and a detailed flash video that is available at www.entuity.com.
