

Overview

Eye of the Storm® (EYE) VMware Module delivers an integrated way to manage VMware infrastructures. Understanding a network’s virtual infrastructure in relation to the physical infrastructure is essential in providing optimum IT Service Delivery. From graphical dashboards, reports, and comprehensive monitoring, the EYE VMware Module gathers information and events from the virtual infrastructure to guarantee optimum performance is achieved.

EYE VMware Module

Introducing the EYE VMware Module

Today’s virtual environments are rapidly transforming IT landscapes by offering reduced IT costs while improving efficiency and application deployment flexibility. However, this ease of implementation combined with the nested nature of virtualized networks compounds the management headaches operations personnel face in keeping IT services optimally performing. A unified approach providing visibility to both physical and virtual networks in the same context gives control and predictability of the IT infrastructure and keeps mission critical business services delivering value to the business.

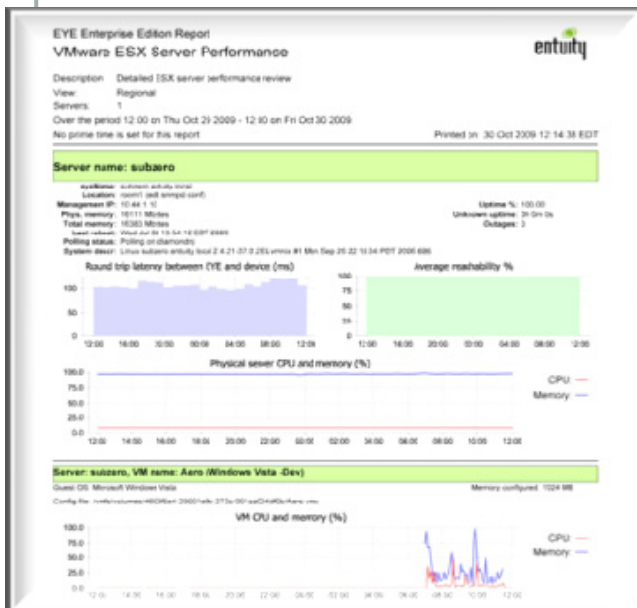

The EYE VMware Module simplifies management and reduces operational costs of VMWare ESX servers. The new module makes VMs visible and manageable in the context of the overall network infrastructure so businesses can reap the benefits of virtualization without running the risk of losing control to “VM-sprawl.” Key configuration and attribute details are automatically captured in the EYE CMDB while operational events and thresholds proactively alert operations personnel to performance anomalies. All historical and real-time data is available for graphing or presentation using EYE’s flexible reporting or data export capabilities.

Recommended for any company needing to improve manageability and IT service delivery to networks including VMs, the EYE VMWare Module brings the visibility and order to virtualised environments needed to proactively manage and maintain a global IT environment. Whether you are a service provider hosting and supporting the network infrastructure for third parties or an IT organization supporting your business units, the EYE VMWare Module gives visibility to eliminate the management headaches of this revolutionary technology.

Key Features and Benefits

The EYE VMware Module provides manageability for VMware ESX servers and is perfect for businesses that utilize VMware in order to save on infrastructure costs by means of not purchasing additional servers. VMware also improves service delivery ramp-up schedules with faster implementation times and also reduces space requirements in racks, network ports, electrical, UPS and cooling needs. Key benefits of the EYE VMware Module include:

- Extensive details captured for both ESX Servers and Virtual Machines providing outstanding manageability.
- Configurable alerts improve the VM impact on network performance.
- Reporting capabilities are easy to implement through the EYE Flex Reports bundle, which can be customized to clearly show necessary details about VMware activities.
- VMware is now a supported platform for EYE enabling the scalability, deployment flexibility and financial benefits of reducing the physical server requirements in the data center.

VMware ESX Server Performance Reports for better management

Management Capabilities

Extensive details captured on both VMware servers and VMs provide comprehensive management visibility of the entire network. The EYE *Component Viewer* seamlessly adds in all VMware devices for increased visibility equipping a single pane-of-glass view of an entire IT infrastructure – including all of

VM servers along with their corresponding virtual environments.

Pre-configured reports provide current and historical forensics of VMware operation and their impact on overall network performance. The addition of the EYE VMware Module ensures that all VMware servers and their associated VMs are configured properly and are not taxing IT service delivery and the network's performance.

Business Impact

With the EYE VMware Module you can eliminate the management headaches brought about by VM sprawl and realize the full potential of your virtualized environments. With visibility and manageability of your IT infrastructure including virtualized environments your organization can:

- Increase profitability through improved productivity by ensuring VM environments are optimally deployed and efficiently performing
- Reduce operations expenditures through a unified management approach to both physical and virtual networks
- Eliminate wasted expense of business service slow-downs and outages by proactively maintaining maximum performance of VM servers and environments
- Automate and fine tune service management processes to use VM resources to their full potential
- Easily identify and remediate even the most intricate time-based or transient VM operation issues for resolution, preventing downtime, additional expense, or penalties on SLAs.

If you are a service provider hosting and supporting the network infrastructure for third parties or an IT organization supporting your business units, the EYE VMware Module keeps virtualized environments optimally deployed and efficiently performing, helping your company achieve more with your computer resources already owned.

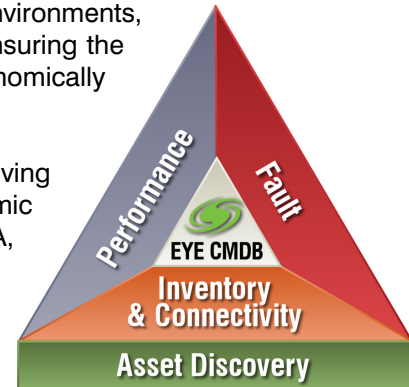

Licensing and Availability

The EYE VMware Module is a stand-alone module for an existing installation of Eye of the Storm Enterprise and is available for the Microsoft® Windows Server®, Sun™ Solaris™, Red Hat® Enterprise Linux®, and VMware® ESX Server environments.

Eye of the Storm Summary

Entuity® offers a complete line of contemporary network management solutions for reducing operational costs while improving services delivery – affordable enterprise class management. Eye of the Storm® (EYE) network management solutions enable IT organizations to quickly and materially reduce costs, and to deliver - and prove - the service levels expected by its customers. EYE gives you insight, control, and predictability of your network's performance and availability - from the core to the edge - with a range of products at price points to match your business model. The EYE product line helps businesses realize the maximum benefit of today's distributed applications, virtualized environments, network-based services, and contemporary data sharing strategies by ensuring the foundational resource for all these initiatives – the network – is economically deployed and optimally performing.

Entuity's customers include Global 2000 companies proactively solving mission-critical business initiatives, leveraging complex and dynamic distributed network environments. A sampling includes: ABB, ACSA, Amtrak, Astra Zeneca, BMC Software, IBM Global Services, Perot Systems, The Royal Bank of Scotland, SASSA, Sony, Visteon, and WorldPay.

Eye of the Storm Enterprise Network Suite

EYE Enterprise Network Suite is the company's flagship scalable, multi-server solution for medium to large enterprises managing the largest and most dynamic networks for some of the most demanding organizations in the world. EYE Enterprise delivers network control and predictability enabling enterprises, system integrators and MSPs to manage network services and assets, meet service level commitments, implement best practices in service delivery, and even develop and monitor Green IT initiatives.

EYE automatically and continually discovers and captures in-depth network data and analytics, and provides integrated fault, device- and flow-based performance management capabilities that help enterprises, service providers, and system integrators reduce network downtime, commit to, deliver, assure and prove service levels, and ensure network configuration compliance. Real-time notifications of physical network and configuration changes, visibility to virtual servers and environments, and open data accessibility prevent user-impacting business service interruptions and enable transparent business-level reporting through high level and detailed reports, corporate dashboards, or mash-ups.

EYE NPE Integrated SME Network Suite

The Entuity Eye of the Storm Network Professional Edition (EYE NPE) is a new class of network management solution focused on the needs of small to medium enterprises (SMEs). It allows SMEs to manage their networks using enterprise-class technology at an affordable price. EYE NPE provides SMEs with a live, accurate view of their network in order to reduce network downtime and ensure optimal network operation so critical business initiatives can be effectively deployed and efficiently maintained.

EYE NPE provides a succinct suite of the most important functionality for network management, presented in an easy to use, quick to deploy format. EYE NPE delivers extremely fast time to value and low total cost of ownership, resulting in superior overall price-performance. Its wide range of capabilities are the practical middle ground between single function point utilities and tools that are difficult and costly to integrate, and heavily laden frameworks that are difficult to deploy, learn, use, and expensive to support. EYE NPE enables SMEs to quickly and optimally manage their networks.

To learn more about EYE NPE for SMEs or Eye of the Storm Enterprise for medium and large enterprises, please contact your local Entuity office, visit www.entuity.com, or email info@entuity.com.
